Note for the MS CGT-HCI Admission Committee

- · This document is submitted to the MS CGT-HCI 2015 full program admission committee as one of work samples.
- This document demonstrates the applicant's following ability (included but not limited to):
 - a. Ability to design the product process
 - b. The analytical thinking behind every carefully design
- · For confidential reality, the content of this document has been changed to a more appropriate manner, the sensitive content has also been deleted, and it is not the most recent update. It might makes the document a little bit vague and reading it might get a little boring.
- · We are developing our first Alpha version and hopefully enter the Beta stage by the end of this summer.

Interaction List

Pick up Energy(from Hotspots)

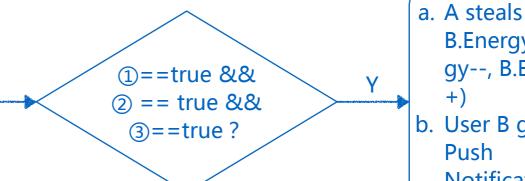

② The User did not pick up anything in the last T minutes from that Hotspot

- a. The User leaves trail on Hotspot.VisitLis
- b. The User gets **Energy**

Steal Energy(from other Users)

- could be stolen today(Lost Count > 0
- ③ Distance between A and B < R(Visible Zone)

①==true &&

②==true?

N

a. Does not get

N

①==true &&

(2) == true &&

(3) = = false?

Ν

a. A failed

Energy

- B.Energy(A.Ener gy--, B.Energy+
- b. User B gets Notification, record on **B.ActionLog**
- a. A failed
- b. User B gets Push Notification, record on **B.ActionLog**

Create Hotspot

① Distance
between
User.CurrentLoc
ation and
Photo.Location
< R

② OP verify

N

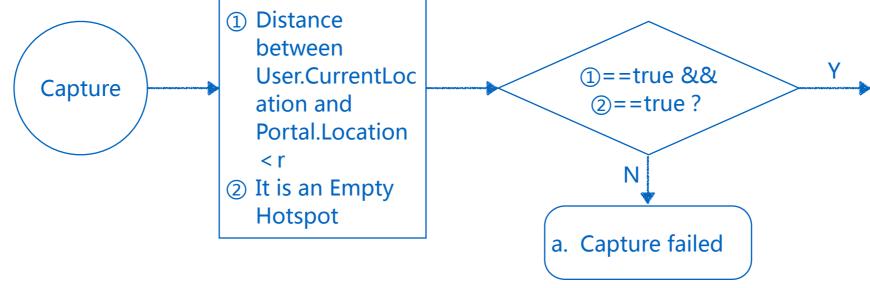

a. Creation failed

Hotspot Owner
c. Push

Notification to Hotspot Owner, record on User.ActionLog

d. Hotspot Owner receives Badge and Energy

Capture Hotspot

- a. Hotspot captured
- b. The UserbecomesHotspot Owner
- c. Push
 Notification to
 Hotspot Owner,
 record on
 User.ActionLog
- d. Hotspot Owner receives Badge and Energy

Defense Hotspot

Defense

- 1 Attacker. Energy Ratio > Price of one attack weapon
- ② Distance between Attacker and Hotspot < r
- 3 Hotspot.LifeRati 0 > 0
- a. The attacker becomes the new hotspot Owner, record on User.ActionLog
- b. New hotspot owner receives Energy and Badge
- c. Push to former hotspot owner, record on User.ActionLog
- d. Hotspot.LifeRatio = full

- ①==true &&
 - ② == true &&
 - (3) = = true ?

(1)==true ?

N

a. No result

a. Attack failed

N

- **Notification** d. Users in range
 - of Hotspot.R get the banner message that Hotspot is been attacking

a. Attacker.Energy

b. Hotspot.LifeRati

c. Hotspot Owner

gets Push

Ratio--

0--

 Hotspot.LifeRati o≤0 because of this attacking event

 Defensing User.EnergyRati o>DefenseWea

- pon.Price ② Distance between defensing User and Hotspot < r
- 3 0 < Hotspot.LifeRati o < Max of Hotspot.LifeRati 0

(1) = = true & & &

② == true &&

③==true?

N a. Defense failed User.EnergyRati 0--

a. Defensing

- b. Hotspot.LifeRati 0++c. Hotspot Owner
- receives push notification

User Operation

App Theme

Information Present

Introduction

Steps of the Interaction Element Selection Process

Step1: Exhaustion

- ①Every operation has response
- ②Every information has notification
- ③Every introduction has inspiration

Step2: Deletion

- ①Do not interrupt user from current process
- 2Do not disturb user often
- ③Delete extra interaction

Step3: Combination

- **①Combine similar interactions**
- ②Simplify the complex interactions, reduce the volume of the process

Step4: Organization

- (1) Smooth the operation process, with simple logic, clear structure
- ②Operations are precognitive, make users feel they are controlling the process
